Summary

IT professional with 6 years of production support experience across web, API, middleware, and database platforms for enterprise banking systems, specializing in application monitoring, incident management, and automation using Python and Selenium. Currently building hands-on SAP BTP development skills through a self-initiated enterprise-style project using SAP CAP and Fiori Elements, transitioning toward SAP CAP development.

Skills

SAP BTP (Self-Directed Learning): SAP CAP, CDS, OData, SAP Fiori Elements, SAP Business Application Studio, Cloud Foundry

Programming & Automation: JavaScript, Java, Python, Selenium

Production Support & Monitoring: Splunk, AppDynamics, Incident Management (P1/P2), Application Monitoring, Root Cause Analysis

Middleware, Infrastructure & Tools: WebSphere, WebLogic, IHS, OHS, Autosys, Linux, Postman, Git

Experience

Support Executive, Tata Consultancy Services (Citi Banamex Bank Mexico) **Aug 2020 – Present**

- Monitor and support enterprise banking applications across web, middleware, API, and batch processing environments, managing P1/P2 incident resolution with cross-functional teams
- Designed and developed a Splunk dashboard that compares current API failure rates against historical averages for the same weekday and time window over a rolling 4-week period, enabling automated anomaly detection and reducing manual monitoring effort
- Automated Autosys job status monitoring using Selenium and Java, reducing manual validation effort across daily batch cycles
- Built Python utilities to validate 200+ application URLs and check application, middleware, server, memory, and filesystem health, generating automated status reports
- Lead a team of 6, coordinating daily support activities, task allocation, and root cause analysis
- Validate API responses, status codes, and performance using Postman

Technologies: *Splunk | AppDynamics | Python | Selenium | Java | Postman | Linux | Autosys | WebSphere | WebLogic*

Projects

Purchase Request Approval Tracker

Self-Directed SAP BTP Learning Project

Developed an enterprise-style Purchase Request Management application using SAP CAP and SAP Fiori Elements to gain hands-on experience with enterprise security, business workflows, and BTP development concepts.

- Designed CDS entities, associations, compositions, and master data models with value help for structured business data management
- Implemented CAP actions, functions, and lifecycle event handlers (before, on, after) to enforce purchase request business validations and workflow logic
- Developed SAP Fiori Elements List Report and Object Page applications with draft-enabled CRUD operations, annotations, and object page navigation
- Configured local security using xs-security.json role templates, scopes, mock authentication, and row-level authorization
- Built enterprise features including attachment handling, Excel bulk upload, approval recommendation, application logging, and overdue request detection with status criticality
- Integrated mock currency conversion, document management, email notification, and workflow callback services to simulate enterprise system integrations
- Deployed and tested the application on SAP BTP Trial using Cloud Foundry, MTA, and HDI container concepts, gaining hands-on exposure to deployment troubleshooting

Technologies: *SAP CAP | CDS | OData | SAP Fiori Elements | Node.js | JavaScript | SAP Business Application Studio | Cloud Foundry | Git*

Education

Bachelor of Engineering, Electronics & Communication Engineering 2020

Kongu Engineering College — CGPA: 8.9/10
